This article is about angelic language, written in John Dee magazines. For the common system of di magic of angels, see for other examples of divine or angelic languages, see the Divine language. Occult or angelic language written in the late 16th century in England in the journals of John Dee and Edward Kelly, which claimed that it was revealed by the Enochian Angels (status controversial)Created by John Diederward KellyOnthing and the useoccult journalsPurposeConstructions of languages Artistic languagesNevry languagesInchian systemOffitia 39-3None (mis)GlottologNoneletFi-enochian (anthochian) is an occult or angelic language enoukian, recorded in the private journals of John Dee and his colleague Edward Kelly in the late 16th century in England. Kelly was a spiritual medium that worked with Dee in his magical research. The men claimed that the language was revealed to him by the Enochian angels. Language is an integral part of the practice of Enochian magic. The syntax and grammar of the Enochian language are very similar to English. The language found in Dee and Kelly's journals includes a limited text case, only some with English translations. Several linguists, notably Donald Laycock, have studied Enochian and oppose any unusual language. In magazines, Dee was not described as Enochian, instead preferring descriptors such as Angelica, Heavenly Speech, The Language of Angels, The First Language of God-Christ, Holy Language or Adamic, because, according to Dee's Angels, it was used by Adam in Paradise to name all things. The term Enochian comes from Dee's assertion that the biblical Patriarch Enoch was the last person (before Dee and Kelly) to know the language. In his text Golden Builders, the concept of angelic or antenatal language was common in Dee's time. If it were possible to speak the language of angels, it was thought that it would be possible to interact directly with them. In 1581, Dee mentioned in his personal diaries that God had sent good angels to communicate directly with the prophets. In 1582, Dee teamed up with pro seer Edward Kelly, although Dee had used several other straits before. With Kelly as a scryer, Dee intended to make lasting contact with the Angels. Their work led, among other things, to the reception of the Enochian or Angelic language. According to Dee's diaries, Angelica was to be the language that God used to create the world, and which was later used by Adam to talk to God and the angels, and to name everything that exists. After falling from Paradise, Adam lost his tongue and built a form of proto-Jewish, based on his vague memory of Angelica. This proto-Jewish, therefore, was a universal man until the time of the confusion of languages in the Tower of Babel. After that, all different human languages were developed, including even more modified Hebrew (which we know as biblical Hebrew). From the time of Adam to the time of Dee and Kelly, Angelica was hidden from the people, with the exception of Patriarch Enoch, who, according to the angels, recorded The Book of Loagat (Speech from God) for humanity. The book was then lost again in Noah's Flood. Enochian's admission began on March 26, 1583, when Kelly reported visions in the crystal of twenty-one letters of the alphabet characteristic of the language. A few days later, Kelly began receiving what became the first corpus of texts in the supposed angelic language. This led to the book by Liber Loagaeth (Book of Speech from God). The book consists of 49 large writing tables, or squares of 49 by 49 letters (however, each table has the front and back side, making 98 49x49 tables in all). Dee and Kelly said the angels never translated the texts in the book. Another set of Enochian texts was obtained through Kelly about a year later, in Krakow, where both alchemists were for some time at the court of King Stephen Bator. They come with English translations, thus providing the basis for the Enochic Dictionary. The texts consist of 48 poetic verses, which in Dee's manuscripts are called Claves Angelicae, or Angelic Keys. The keys are assigned certain functions in the magic system. Dee apparently intended to use these Keys to open the 49 gates of Wisdom/Understanding presented by 49 magical squares in Liber Loagat: So I have to instruct and inform you, according to your doctrine delivered, which is contained in 49 tables. In 49 voices, or callings: which are the Natural Keys to open those not 49, but 48 (for one will not be opened) Gate of Understanding, according to which you must have the knowledge to move the entire Gate ... Angel Trolle But you will understand that these 19 Calls are The Calls or the entrances to the knowledge of the mystical Tables. Each table contains one whole sheet where you don't need other circumstances. Angel Illemese Although these texts contain most of the vocabulary, dozens of other words are found hidden in all Dee magazines, and thousands of vague words are contained in Liber Loagaeth. The Alphabet Enochian font is written from right to left and can include diacritic signs. Different documents have slightly different forms of script. Some letter names are pronounced in the same way as in English, but many of them are pronounced differently. Enoch letters have English letter equivalents. Several different fonts for the Ichian alphabet are available, using English letter equivalents to access the Enohilian glyphs. The Enochian letters are read from right to left, as written in John Dee's diary. The Enochian alphabet with forms, letter names, English equivalents, and pronunciation of letter names (pronunciation in quotes if a different from English): /a/B Pa/bC/K Veh/K/, /s/ D Gal/d/ E Graph/e/, /e/ F/H/G/J Ged/d'j/, /g/ H Na/h/ I Gon/i/, /h/, /j/ L your /I/M/M/N Dru/x/h/ O /Med, /z/ P Mals/p/ q Ger /kw/ R Don /u r/ S Fam/s/, /z/ T Gisg /u/ U / V Van /u /, /u/, /j/, /w/ X Pal /i/ ks/ Y / W Gon (from the point) /j/j/i/, /u/q Ceph /z/ Linguistic assessments Australian linguist Donald Laycock noted the discrepancy between the two identified sets of Enochian texts as a sign that Enochian is not a consistent language. According to Laycock, the texts in Loagaeth's material show phonetic features that do not normally appear in natural languages. Rather, the traits shown are commonly found in cases of glossolalia (speaking in tongues), which suggests that Kelly actually created at least this set of essays in this way. According to Leikok's linguistic analysis, the syntax of Enochian calls is almost identical to English. In addition, the very meagre evidence of conjugation of Enochian verbs seems to be very similar to English, especially since with Semitic languages like Hebrew or Arabic, which Dee claimed were debased versions of the original angelic language. There are only two known verbs with conjugations, one of which, to be, is extremely irregular. While some phonetic features of Enochia show a connection with glossolalia, others show similarities with the English language. Both languages have soft and rigid consonants, such as c and g, and combine s and h to make a sh sound. As for the semantics of Enochia, there was an additional similarity with English. For example, the luciphism, a term meaning brightness, may well have a connection with Lucifer, whose name means light. London, the word meaning kingdom, may have come from the admiration of Dee Elizabeth I. These and other examples have led skeptics to believe that many of these terms are derived from concepts that would have been modern in the time of Dee and Kelly. Alphabet also has many graphic similarities to the script, also attributed to the prophet Enoch, who appeared in Johann Pantea's Voarchadumia Contra Alchimiam, a copy of which Dee is known to have owned.
